Dear Feel Free Games:

I've noticed you are open for a position for a Senior Unity Developer, although I've never been in a Senior position before, I am a person who appreciates solving complex problems.

In Unity, I've developed a project that teaches student CPR through VR, during that project I solved many issues to make sure it doesn't cause problems when scaled and also fixing Unity's localization limitation for Right to Left languages (mainly Arabic) through a custom solution that gets applied to UI GameObject(s) in the scene.

During my time in University, I've messed around both with Unity but also in the modding scene for the video game "A Hat in Time" to develop my programming knowledge and mess around with ideas that bring something new to the community to enjoy, I've been a lead programmer on a lot of private projects in the modding scene while also developing some of my own with 3 getting spotlighted by the developers to accommodate as a recommended mod to experience.

If you have questions, or if you want to schedule an interview, please contact me through my email. I look forward to meeting you to further discuss employment opportunities. My verbal communications in English are very strong.

Sincerely,

Sami Shakkour
