PROFESSIONAL SUMMARY

Full-Stack Developer with a BSc in Computer Science and hands-on experience building modern web applications and interactive systems. Experienced with React, TypeScript, JavaScript, and REST APIs, as well as multiplayer and XR-based applications. Developed full-stack tools, networking systems, and VR training simulations. Currently expanding expertise through a Game Development and Design program while continuing to build full-stack and interactive projects.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, C++, C#, Python, Java

Frontend: React.js, HTML5, CSS3, Responsive Web Development

Backend: Node.js, REST APIs, Web Application Architecture

Game / XR Technologies: Unity, Unreal Engine, XR Toolkit, VR/AR Development

Tools: Git, GitHub, Linux, Windows, Android

ACHIEVEMENTS

- Designed and implemented a full-stack collaborative web application enabling groups to coordinate multiplayer gaming sessions.
- Developed a multiplayer communication system using Steam Networking API, implementing gameplay-driven interaction instead of traditional chat systems.
- Built and immersive VR training simulator teaching CPR procedures using Unity and XR Toolkit.
- Developed web tools enabling creation and editing of 3D assets used in Augmented Reality environments.

PROFESSIONAL EXPERIENCE

Web Developer – Orb-AR (Startup Collaboration) *2024 – 2025*

- Developed a web platform enabling users to create and edit 3D assets for Augmented Reality experiences.
- Built frontend components and user workflows using modern JavaScript technologies.
- Designed backend APIs supporting asset creation and editing functionality.
- Collaborated directly with the founder to prototype and implement platform features.

VR Developer – Arab American University *2023*

- Assisted development of VR learning environments for computer science students.
- Implemented interactive training elements using Unity and XR Toolkit.
- Supported XR-based senior projects and research experiments.

PROJECTS

Insaniquarium.ts – Video Game Imported to the Web *2026 - Present*

Personal Project

- Game recreation developed via a hand-made TypeScript engine.
- Copyright safe by importing the original game's assets from a legally owned copy and then play.

Tech: TypeScript, Git

Playfrens – Full-Stack Web Application *2025 - Present*

Personal Project

- Built a collaborative platform helping groups coordinate multiplayer gaming sessions.
- Implemented frontend UI, backend logic, and interaction flows.

Tech: React, JavaScript, Git

Online Communication Mod – Multiplayer Chat *2023 – 2024*

- Developed a multiplayer communication mod using Steam Networking API for the game “A Hat in Time”.
- Implemented event-based interaction mechanics replacing traditional text cha

Tech: UnrealScript, Unreal Engine, Steamworks API

CPR VR – Virtual Reality Training Simulation *2023 – 2024*

- Developed a VR educational simulator that teaches CPR procedures through guided interactive training scenarios.

EDUCATION

2025 – Present: Game Development & Design – Tiltan School of Design & Visual Communication

2019 – 2023: BSc in Computer Science | Arab American University

2017 – 2018: Full-Stack Development Program | Founders & Coders
